Long Seller
Over 20 Years

Sales Results
over 5,000 units

PC TESTER prevents defective welding in Projection Welding of Nuts & Bolts.

Components and Functions

+

Detection Unit

Controller

- * If Nuts/Bolts are placed in NG conditions (outside the setting range), welding current is cut off. (So, defective welding cannot happen at all.)
- * Judgement time is 0.1 second. No hindrance to the operations.
- * Memorizing the right setup position, the sensor detects the right position at every operation.
- * Controller displays the NG conditions by Numeric Value.

PC Tester takes 0.1 second to judge either OK or NG.
